Space for Trust

Know Yourself, Your Supply Chain and Your Enemies

Safety, Security & Resilience of Space-Based Assets, Spectrum, Ground Systems, Their Supply Chains, Stakeholders & Other Earthlings

Arthur van der Wees

Managing Director Arthur's Legal, Strategies & Systems, the independent, global strategic legal firm & knowledge partner, covering the unique combination of technology, strategy, impact, ethics & law focusing on (inter)national, regional and global strategy & policy aspects in this Digital Age

Expert Advisor to Public & Private Sector organisations within EU, EEA, UK, NATO allies and friends (Digital Ecosystems, Data, Digital Identity, IoT, AI, Robotics, Computing, Spectrum, Dynamic Attributes, Risk, Safety, Cybersecurity, Privacy, Trust, Dynamic Assurance, Digital Sovereignty, Accountability & Rule of Law)

Member of European Alliance for Industrial Data, Cloud & Edge (Leader of Digital Sovereignty Taskforce, Cybersecurity Taskforce & Common Trust Principles)

Project Leader, Ethics, Security & Advisory Board Member to 25+ European projects on Data, Trust, Security, Privacy, Ethics, Accountability & Risk in Digital Ecosystems

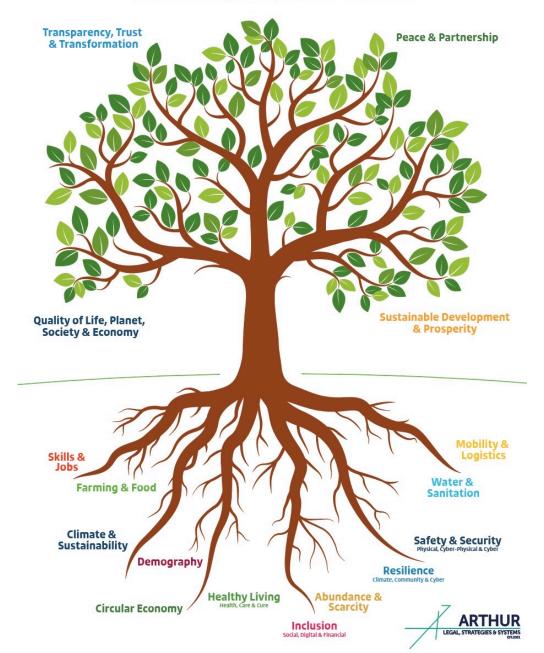

Expert Member of Expert Group of European Commission on B2B Data Sharing & Computing Continuum (Data Act)

Co-Creating Stellar Systems

InterTwined Ecosystems

Powered by Purpose & Passion

CONCORDIA National Stakeholder Group Focus Areas Priorities (2022)

EU Cybersecurity Industrial, Technology & Research Competence Centre, the Network of National Coordination Centres & Friends

Demand- & Use-Procurement side

also within public sector organisations

SMEs Demand-side

Awareness, Resilience & Digital
Transformation

Robust Upstream & Supply Chain Resilience

Awareness, Education, Training & Skills

Experts/Resource Pooling

Capacity Building

Trusted Data Sharing

Data, Information & Knowledge, PPP-style

X By Design & X
By Implementation
in OT, IT, IoT & Data

Sovereign Infrastructure & Work Space Resilience

Multi-Layered Governance

Strategic, Tactical & Operational

Play to Win

No Reason To Go Alone

Minimise Surprises

Grasping Importance

Building Interdisciplinary

EU Communities & Ecosystems

Based on Chatham House Rule / Short, Mid & Long Term Priorities Combined

Space Sector is an Essential & Key Enabler

The Proliferation of the Space Sector Ecosystem reminds us of the early '90s of Internet 1.0

Commercialisation, Dependability & Opacity

Space Sector has a vast supply chain ecosystem, including more and more digital and data assets

In general, 30% of Economic Value in this ecosystem is created by SMEs (which is expected to increase)

However, being Valuable equals Getting Special Attention

Anything that can be connected can get compromised

Space borne systems, such as communication satellites, navigation, sensory, earth observation, and a multitude of other functionalities, form an integral part of global communication, data processing, OT, IT & IoT – critical and other - infrastructures.

To date the interplay of Space and Cyberspace is underrated.

This part of our connected, inter-connected and hyper-connected world, which is a set of complex infrastructures and supply chain ecosystems, requires immediate, dedicated and continuous attention.

#Systematic Risk

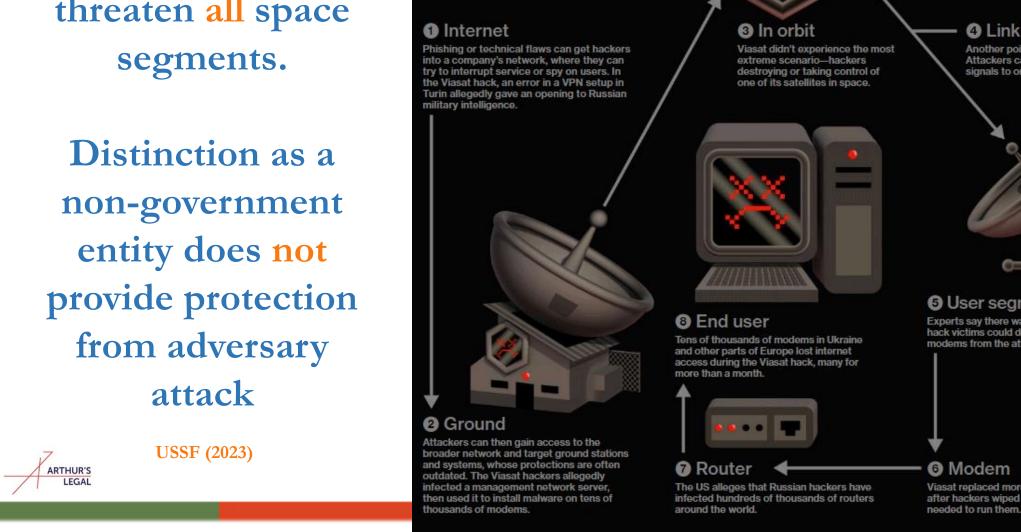

Some Types of Threats & Vulnerabilities in Space Systems (Ground, Space & Network Segments) & their Supply Chain Ecosystem

- **A.** Access: Cyberattacks and intrusions against ground systems and infrastructures supporting space operations as well as user applications and interactions.
- **B. KYS** (Know Your Satellite): Adversary using space situational awareness to target satellites, attack space assets with counterspace weapons, and assess the effectiveness of those attacks.
- C. Lock out: Adversary taking control of space assets in an unauthorized manner by operationally infiltrating and compromising satellites and locking out the legitimate satellite owners.
- **D.** Inject: Exploitation of the software and hardware vulnerabilities of the space assets.
- E. Hijack: Attacker altering the legitimate signals of a satellite and reusing it for another purpose.
- **F. Shadow**: Monitoring and tracking of military and other sensitive activities and locations on the earth using space assets such as surveillance satellites.
- **G.** No Comm: Adversaries conduct attacks to disrupt, deny, deceive, or degrade space communications, navigation and other services.
- H. Too Much Comm: Eavesdropping on satellite communications.

Cyber capabilities threaten all space segments.

@ Link Another point of vulnerability: Attackers can jam or intercept signals to or from satellites. User segment Experts say there was nothing the Viasat hack victims could do to protect their modems from the attackers' malware. Modem Viasat replaced more than 45,000 modems after hackers wiped the flash memory

Space for Trust

Know Yourself, Your Supply Chain and Your Enemies

Find & Fix Deficiencies whether these Arise from Design, Operation, Dependencies, Law or Deliberate Instances

Rethink Upstream, Midstream, Sidestream & Downstream
Trusted Data Sharing, Updatability & Resiliency

Our Vision, Mission & Mode of Operation

Welcome to Arthur's Legal, Strategies & Systems

the independent, global strategic legal firm & knowledge partner, covering the unique combination of societal challenges, knowledge, technology, strategy, impact, ethics, law & trust focusing on (inter)national, regional, global and galactic strategy & policy aspects in this Digital Age
